

REFERRING PRACTITIONER Sample Candida report	PATIENT DOB: Test #: Date: Lab #:
---	---

SEROLOGY

Specimen: Serum

<i>Candida species</i>	25	<i>Positive</i>
<10	<i>Negative</i>	No evidence of recent infection
>10	<i>Positive</i>	Suggestive of a recent or current infection

RESULTS

Note: If an infection is suspected this can be confirmed by testing a further specimen 7-14 days later.

Disclaimer: The following disclaimers should be made: a) Procedure does not differentiate between superficial or systemic infection b) Some individuals (immuno suppressed patients) may not produce a detectable antibody titre. c) Australian Biologics Testing Services disclaims any responsibility for the use of these tests by clinicians for either the diagnosis of chronic illness or the design of patient management schedules d) Test results may be affected by improper specimen collection and/or handling. A negative test result does not exclude the possibility of candidiasis.

AustBio's Candida Antibody test will detect antibodies to Candida Albicans. The test should be used for confirmation purposes when there is a suspected case of infection with Candida.
